Reactome (miRPathDB) (Enriche

Activation of BH3-only proteins

Activation of BAD and translocation to mitochondria

Regulation of localization of FOXO transcription factors

Estrogen-dependent nuclear events downstream of ESR-membrane signaling

Extra-nuclear estrogen signaling

Hemostasis

AKT phosphorylates targets in the cytosol

Costimulation by the CD28 family

Interleukin-4 and Interleukin-13 signaling

Transcriptional regulation by the AP-2 TFAP2 family of transcription factors

Platelet Aggregation Plug Formation

Signaling by Receptor Tyrosine Kinases
